### Applications Of Sinusoidal Functions Answer

a) Use sinusoidal functions to find the depth  $d(t)$  of the water, in meters, as a function of time  $t$  in hours. (Assume that 8 am corresponds to  $t = 0$ .) b) Find the depth of water at noon. c) Use the graph of  $d(t)$  and analytical calculations to calculate the interval of time during which the depth  $d$  is below 1.5 m from 12 pm to 6 pm. Solution

How do you find when the ferris wheel is over a certain height without using a graph? At one time, Maple Leaf Village (which no longer exists) had North America's largest Ferris wheel. The Ferris wheel had a diameter of 56 m, and one revolution took 2.5 min to complete. Riders could see Niagara Falls if they were higher than 50 m above the ground. Sketch three cycles of a graph that ...
