Dennard scaling, also known as MOSFET scaling, is a scaling law which states roughly that as transistors get smaller, their power density stays constant, so that the power use stays in proportion with area; both voltage and current scale (downward) with length. The law, originally

formulated for MOSFETs, is based on a 1974 paper co-authored by Robert H. Dennard, after whom it is named.

In solid-state physics, a band gap, also called an energy gap, is an energy range in a solid where no electronic states can exist. In graphs of the electronic band structure of solids, the band gap generally refers to the energy difference (in electron volts) between the top of the valence band and the bottom of the conduction band in insulators and semiconductors.
