Electrically Conductive Silicone Rubber Sheet

Electrically Conductive Solid Silicone Sheet. Electrically conductive solid silicone sheeting is a low amperage semi-conductive silicone sheet. It's commonly used in electrical cabinets, PC boards, and RMI/EFI gaskets. It is easily die cut and provides a superior gasket and sealing solution. Thicknesses range from .020" to .375" thick.

An electrical insulator is a material in which electric current does not flow freely. The atoms of the insulator have tightly bound electrons which cannot readily move. Other materials, semiconductors and conductors conduct electric current more easily. The property that distinguishes an insulator is its resistivity; insulators have higher resistivity than semiconductors or conductors.

Thermal interface silicone soft pads / ultra soft pads are made of silicone rubber combined with thermally conductive fillers. The line-up are single layer type and composite type. They are soft with good adhesion, so they bonding tightly to the heat-generating unit and the heatsink, providing more efficient cooling.
