3. Installing the flue system. 1. Locate the wood fire in its proposed position and mark a point on the ceiling that is directly above the centre of the wood fire's flue spigot. Check that the wood fire's location allows the outer casing to clear all structural roof timbers. 2. Cut a 250mm square hole in ceiling.

## **Standard Flue System Installation Manual**

When installing a new twinwall flue system, if the flue exits the roof within 600mm (horizontally) from the ridge (high point) of the roof then the flue must extend a minimum of 600mm above the ridge. If the flue exits the roof further down then it must extend high enough to achieve 2.3m of horizontal clearance.
