Heap Data Structure Recent articles on Heap ! A Heap is a special Tree-based data structure in which the tree is a complete binary tree. Generally, Heaps can be of two types: Max-Heap: In a Max-Heap the key present at the root node must be greatest among the keys present at all of it's children.

Heap Data Structure - GeeksforGeeks

For example, a List ADT can be represented using an array-based implementation or a linked-list implementation. A List is an abstract data type with well-defined operations (add element, remove element, etc.) while a linked-list is a pointer-based data structure that can be used to create a representation of a List.

what is abstract data types? | Yahoo Answers

Do you understand what stacks and queues are? A stack is a last in first out (LIFO) data structure. Think of a stack of dishes (your first example). The last dish you put on the stack is the first one you take off the stack. A queue is a first in first out data structure. Think of a line at a bank (first example).

What are 10 real life examples of stacks ... - Yahoo Answers

140/36.5 = 3.83 approx = 4. so my guess is that the quaternary structure is 4 strands of the monomer connected to give the overall protein.
